São Paulo, Brazil | +55 (11) 999-256-971 | mhoozaifa@gmail.com

Portuguese | Spanish | Hindi | Marathi | English

SUMMARY

AI-native Solutions Engineer with 10+ years in SaaS across presales, implementation, and technical account management. Own **5+ concurrent enterprise Voice AI deployments (\$300K+ MRR)** end-to-end — discovery, solution architecture, demo/POC, build, QA, go-live, and optimization — while partnering with AEs on **40+ opportunities (72% technical win rate, \$1.5M+ ARR influenced)**. Build **production AI agents, workflow automations, internal tools, and full-stack systems** in Claude Code, Cursor, n8n, Zapier, HubSpot, Salesforce, Supabase, PostgreSQL, Pinecone/RAG, REST APIs, webhooks, and tool calling. Trusted by sales, CS, product, and engineering to translate messy operational problems into **technical demos, POCs, and customer-ready AI solutions**.

CORE COMPETENCIES

AI Automation Engineering | Full-Stack Internal Tools | **Claude Code** | **Codex** | Cursor | Lovable | **AI Agents** | **Agentic Workflows**

n8n | Zapier | Make.com | Activepieces | Airtable | HubSpot | Salesforce | Slack | Google Sheets | Supabase | PostgreSQL

REST APIs | Webhooks | OAuth | API Keys | JSON Schema | Tool Calling | Function Calling | **Workflow Orchestration** | **Event-Driven Automation**

RAG Systems | Vector Databases | Pinecone | **Knowledge Base Automation** | Embeddings | LLM Evals | Guardrails | Prompt Engineering

Python | Node.js | TypeScript | SQL | FastAPI | Next.js | React | GitHub | Docker | AWS | **Serverless Workflows**

Retries/Backoff | Idempotency | Rate Limits | Error Handling | Audit Logs | Monitoring | Slack Alerts | Data Validation

Solutions Engineering | Technical Account Management | **Enterprise Implementation** | **Process Optimization** | Voice AI | STT/TTS | Telephony

EDUCATION

Montclair State University, Feliciano School of Business, *Montclair, USA*

Bachelor of Science, Major in International Business with a Minor in Economics May 2016

PROFESSIONAL EXPERIENCE

Sr. Solutions Engineer – Enterprise Implementation & Adoption (Voice AI)

Berlin, Germany (Remote)

Synthflow.ai

Jan 2024 – Present

• **AI Automation & Internal Tools**

- Built 30+ production automation systems and internal apps with Claude Code, Cursor, n8n, Zapier, and Supabase, eliminating 25+ hours/week of manual work across sales, support, and customer success.
- Designed end-to-end revenue workflows (lead capture → enrichment → qualification → CRM update → owner assignment → Slack alert → follow-up) that cut lead response time from 4+ hours to under 5 minutes and lifted demo-booking rate 31%.
- Built Slack-to-knowledge-base scraper bots that converted 800+ high-value internal threads into structured, reusable KB entries — keeping AI agent knowledge current and cutting repeat internal questions 45%.
- Shipped 12 lightweight full-stack internal tools (Python/Node.js, Supabase, REST APIs, AI-assisted coding) that replaced fragmented manual processes — QA tracking, deployment checklists, usage reporting — saving the delivery team 15 hours/week.

• **Expertise in Enterprise Ready Voice AI Delivery at Scale**

- Owned full-cycle Voice AI implementations — technical discovery, solution design, build, QA, go-live, monitoring, and optimization — for 5+ concurrent enterprise deployments totaling \$300K+ MRR, with 95% on-time go-lives and <2% logo churn.
- Designed real-time conversational AI systems connecting ASR, TTS, streaming audio, WebRTC/WebSockets, and tool calls, sustaining 200K+ production calls/month at 99.9% uptime.
- Implemented telephony and IVR automation over VoIP/SIP (Twilio/Vonage-style) so AI agents answer, route, qualify, and escalate live PSTN calls — raising call containment from 58% to 81% on the largest account.
- Cut median voice-agent response latency from 1.8s to 850ms using Deepgram, Whisper, ElevenLabs, barge-in, VAD, and turn-taking tuning — lifting post-call CSAT from 3.9 to 4.6/5.

• **CRM, Database & Automation Engineering**

- Built API-first CRM automations across HubSpot and Salesforce enabling AI agents to create, search, update, and enrich contacts, leads, deals, and tickets in real time — syncing 10K+ records/month at a <0.5% error rate.
- Engineered integration layers with OAuth/API-key authentication, schema validation, idempotency, retries/backoff, and rate-limit handling — cutting workflow failure rates from ~8% to <1% and eliminating 90% of manual error triage.
- Connected AI agents to PostgreSQL, Supabase, and Pinecone via tool calling and RAG, grounding responses in 50K+ documents and reducing wrong-answer escalations 60%.
- Orchestrated 40+ multi-step automations in n8n, Zapier, Make.com, GHL, and Activepieces — capture, enrichment, CRM updates, scheduling, approvals, and reporting — processing 15K+ events/day.

- Wrote Python glue code and Node.js/TypeScript webhook services to bridge platform gaps and normalize payloads, adding logs, dashboards, and Slack alerts that cut mean time-to-detect production failures from ~6 hours to under 10 minutes.
- **LLM Systems, Tool Calling & Agent Reliability**
 - Architected production LLM agents with system/developer prompts, tool/function schemas, structured outputs, memory/context injection, and fallback logic — raising end-to-end task completion from 71% to 93% across voice and chat workflows.
 - Built agent tool-calling layers with input/output schemas, validation rules, retries, and permission boundaries so agents safely executed 25+ API actions (CRM updates, database queries, scheduling, handoffs) at 99.2% call success.
 - Enforced deterministic outputs via JSON Schema, enum constraints, and required-field validation — letting downstream automations consume AI output with zero manual review in 85% of cases.
 - Ran agent QA loops — transcript reviews, a 400+ case regression suite, Cekura tests, prompt/version testing, and failure analysis — cutting hallucination and tool-misuse incidents 70% quarter-over-quarter.
 - Built safety and control layers (prompt-injection defenses, scoped tool access, refusal logic, low-confidence fallbacks, human handoff) holding escalation-worthy incidents under 0.3% across 200K+ monthly calls.
- **Sales Engineering: Enterprise Demos & Solution Architecture**
 - Partnered with AEs as lead SE on 40+ enterprise opportunities — ran technical discovery, mapped business problems to automation architectures and integration plans, and closed technical objections to a 72% technical win rate.
 - Delivered 60+ tailored demos and 20+ POCs combining AI agents, CRMs, databases, telephony, and workflow tools; 65% of POCs converted to paid contracts, influencing \$1.5M+ in new ARR.
 - Created solution briefs, workflow diagrams, SOW-ready scopes, rollout plans, and handoff documentation that cut sales-to-implementation handoff time from 3 weeks to 4 days.

Technical Account Manager — AI Automation, Enterprise Accounts & Internal Tools

Rayobyte.com

Lincoln, USA (Remote)

June 2022 – December 2023

- **AI Automation, Internal Tools & Operational Scaling**
 - Built internal AI tools, automation workflows, and client enablement systems that scaled enterprise operations from 5 to 20 active enterprise accounts (4x) in 18 months with no added headcount.
 - Created automation infrastructure for onboarding, account management, client customization, support enablement, and knowledge sharing — cutting client onboarding time from 3 weeks to 6 days and removing 15+ manual handoff steps.
 - Designed RAG-based internal knowledge systems (Custom GPTs, AI agents, Pinecone vector search) that cut product/process answer retrieval for support, CS, and sales from ~20 minutes to under 2.
- **Client Insights, Product Feedback & Technical Problem Solving**
 - Analyzed 100+ client onboardings to identify recurring implementation blockers, product gaps, and friction points — converting findings into 12 prioritized product proposals, 7 of which shipped within two quarters.
 - Built data-backed business cases for Product and Engineering translating customer problems into technical requirements, workflow changes, and dashboard needs; 3 resulting features were cited in renewals worth \$40K+ MRR.
 - Partnered with engineering to deliver technical fixes, workflow improvements, dashboard enhancements, and account-level customizations, contributing to a 15% improvement in client retention.
- **Enterprise Technical Account Management & Usage Analytics**
 - Owned 7 high-value enterprise accounts totaling \$85K MRR end-to-end — onboarding, implementation, API usage, troubleshooting, billing, and growth — with zero logo churn and 110%+ net revenue retention over 18 months.
 - Led complex API and proxy troubleshooting across scraping APIs, authentication, usage tracking, and customer-side integrations, resolving 600+ technical tickets at a 92% first-time resolution rate.
 - Built custom ELK/Elasticsearch dashboards tracking client usage, churn-risk signals, and abnormal traffic patterns — flagging 9 at-risk accounts before escalation and saving an estimated \$25K MRR from churn.
- **Solutions Architecture, Pricing Systems & Revenue Engineering**
 - Generated \$120K+ in new MRR by combining technical discovery, infrastructure planning, pricing strategy, product education, and consultative sales across 30+ complex scraping/proxy evaluations (45% eval-to-close rate).
 - Designed an AI-powered quote calculator using LLMs to price complex Scraping API deals — factoring infrastructure sources, target difficulty, usage volume, and cost models — cutting quote turnaround from 2–3 days to under 4 hours.
- **n8n Automation, AI Agents & Support Tooling**
 - Built n8n + Perplexity lead-enrichment workflows that auto-researched 1,000+ prospects/month, identified key decision makers, and enriched HubSpot properties — cutting SDR research time 50% (~10 hours/week per rep).
 - Deployed AI-powered Freshdesk Level 1 support agents using RAG, vector search, and structured knowledge retrieval that auto-resolved 35% of routine inquiries and improved first-response time 40% (4.5 to 2.7 hours).
 - Built Custom GPTs and internal AI assistants replacing scattered Confluence/internal KB lookups — bringing new support agents to senior-agent answer accuracy in 3 weeks instead of 3 months.

- **Team Leadership & Process Management**

- Managed 5 direct reports — setting performance goals, running weekly 1:1s, and coaching on enterprise account ownership, technical troubleshooting, and client communication; all 5 hit quarterly targets and 2 were promoted within a year.
- Improved team productivity 40% by standardizing workflows, documenting 25+ repeatable processes, and building internal enablement tools for technical account ownership.

Previous Roles

Implementation Manager at Smartkargo.com (Sao Paulo, Brazil)

July 2017 – June 2022

Project Manager at Schlesinger Group (Los Angeles, USA)

July 2016 – Sep 2017

Languages

English (Native), Portuguese (Native), Spanish (Business), Hindi (Native), Marathi (Native)

Software/Tools

AI & Automation: Claude Code, Codex, Cursor, Lovable, n8n, Zapier, Make, Workato, MuleSoft, Airtable

CRM, Support & GTM: HubSpot, Salesforce, Pipedrive, Gainsight, Totango, ChurnZero, Freshdesk, Zendesk, Intercom

APIs, Data & Dev Tools: REST APIs, Webhooks, SQL Server, Snowflake, ELK, Power BI, Tableau, Postman, SOAP UI, VS Code

Cloud, Voice & Collaboration: AWS, Azure, GCP, SIP, PBX, call routing, Slack, Microsoft Teams, Google Workspace, Jira, Confluence, Asana

GLOBAL TEAM COLLABORATION

Led and collaborated with distributed teams across the Americas, Europe, Africa, and Asia, managing cross-functional delivery across time zones through clear communication, goal-setting, and stakeholder alignment.
