SUMMARY

Technical Account Manager with **10+ years in SaaS** owning enterprise relationships end-to-end — onboarding, technical implementation, adoption, escalation, renewal, and expansion. Currently own a **\$300K+ MRR enterprise portfolio** across 5+ concurrent Voice AI accounts at **<2% logo churn and 128% net revenue retention**; previously owned 7 enterprise accounts (\$85K MRR) with **zero logo churn and 110% + NRR over 18 months**. Technical enough to debug REST APIs, webhooks, integrations, and CRM data flows without waiting on engineering — and commercial enough to run QBRs, defend renewals, and build the business case for expansion. Trusted escalation point for **600+ resolved technical issues at a 92% first-time resolution rate**.

Interactive portfolio — 4 runnable automation workflows and a live enterprise Voice AI case study:

CORE COMPETENCIES

Enterprise Account Ownership | Net Revenue Retention | Renewals & Expansion | Churn Prevention | QBRs & Executive Business Reviews

Technical Escalation Management | Root-Cause Analysis | API & Integration Troubleshooting | Incident Communication | SLA Management

Onboarding & Implementation | Adoption Strategy | Success Planning | Stakeholder Mapping | Customer Advocacy | Voice of Customer

CRM & CS Platforms: HubSpot | Salesforce | Gainsight | Totango | ChurnZero | Zendesk | Freshdesk | Intercom | Jira | Confluence

Technical: REST APIs | Webhooks | OAuth | Postman | SQL | ELK/Elasticsearch | Power BI | Tableau | Usage Analytics | Health Scoring

AI & Automation: Claude Code | AI Agents | RAG / Knowledge Bases | n8n | Zapier | Make.com | Airtable | Workflow Automation

EDUCATION

Montclair State University, Feliciano School of Business, Montclair, USA

Bachelor of Science, Major in International Business with a Minor in Economics — May 2016

PROFESSIONAL EXPERIENCE

Sr. Solutions Engineer — Enterprise Accounts, Implementation & Adoption (Voice AI)

Berlin, Germany (Remote)

Synthflow.ai

Jan 2024 – Present

• Enterprise Account Ownership & Retention

- Own **5+ concurrent enterprise accounts totaling \$300K+ MRR** as the single accountable technical owner — onboarding, implementation, adoption, escalation, QBRs, and renewal — sustaining **<2% logo churn and 128% net revenue retention**.
- Run **quarterly business reviews with VP- and C-level stakeholders**, tying platform usage to their KPIs (containment, cost per call, CSAT) — converting **9 of 11 QBRs into documented expansion or multi-year renewal commitments**.
- Built success plans with defined value milestones and 30/60/90-day adoption targets, lifting average account **product adoption from 54% to 87% of licensed capability** within two quarters of go-live.
- Identified and drove **\$220K+ in expansion MRR** by mapping unused use cases to customer business problems and building ROI cases the account's own finance team could defend internally.

• Technical Escalation & Platform Reliability

- Serve as **lead technical escalation point** across the enterprise portfolio, resolving API, integration, telephony, and configuration incidents at a **94% first-time resolution rate** and a **2.1-hour median time to first meaningful response**.
- Cut median voice-agent response latency **from 1.8s to 850ms** (Deepgram, ElevenLabs, barge-in, VAD, turn-taking tuning) — lifting post-call **CSAT from 3.9 to 4.6/5** and removing the top churn driver cited in renewal conversations.
- Raised **call containment from 58% to 81%** on the largest account by re-architecting IVR routing, escalation logic, and human-handoff thresholds — a **\$38K/month** documented cost saving the customer cited at renewal.
- Own reliability for **200K+ production calls/month at 99.9% uptime**, with proactive monitoring and Slack alerting that cut mean time-to-detect production failures **from ~6 hours to under 10 minutes**.

• Onboarding, Implementation & Time-to-Value

- Deliver full-cycle enterprise implementations — technical discovery, solution design, integration build, QA, go-live, and optimization — at **95% on-time go-live** and a **median 24-day time-to-first-value**, down from 61 days.
- Guide customer teams through **HubSpot, Salesforce, telephony/SIP, and database integrations** using REST APIs, webhooks, and OAuth — owning setup when the customer lacks capacity, coaching their engineers when they have it.
- Cut sales-to-implementation handoff time **from 3 weeks to 4 days** with standardized solution briefs, integration maps, rollout plans, and success criteria signed off by the customer before kickoff.

• Customer Advocacy & Internal Enablement

- Convert recurring account friction into prioritized product requirements with Product and Engineering — **11 requests shipped**, 3 of which were named by customers as renewal-deciding.
- Built **30+ internal automations and tools** (Claude Code, n8n, Supabase, REST APIs) for account health reporting, QA tracking, and usage alerts — saving the delivery team **25+ hours/week** and surfacing risk before customers raised it.

- **Enterprise Portfolio Ownership & Net Revenue Retention**

- Owned **7 high-value enterprise accounts totaling \$85K MRR** end-to-end — onboarding, implementation, API usage, troubleshooting, billing, and growth — delivering **zero logo churn and 110%+ NRR over 18 months**.
- Generated **\$120K+ in new MRR** through consultative technical discovery, infrastructure planning, and pricing strategy across **30+ complex proxy/scraping evaluations at a 45% eval-to-close rate**.
- Scaled the enterprise book **from 5 to 20 active accounts (4x) in 18 months with no added headcount** by building repeatable onboarding playbooks, enablement systems, and account automations.

- **Churn Prevention & Account Health Analytics**

- Built custom **ELK/Elasticsearch health dashboards** tracking usage trends, churn-risk signals, and abnormal traffic — flagging **9 at-risk accounts before escalation and saving an estimated \$25K MRR**.
- Analyzed **100+ client onboardings** to isolate recurring blockers and friction, converting findings into **12 prioritized product proposals (7 shipped within two quarters)** and contributing to a **15% improvement in client retention**.
- Built data-backed business cases translating customer problems into technical requirements and dashboard needs; **3 resulting features were cited in renewals worth \$40K+ MRR**.

- **Technical Escalation & API Troubleshooting**

- Led complex **API and proxy troubleshooting** across scraping APIs, authentication, usage tracking, and customer-side integrations — resolving **600+ technical tickets at a 92% first-time resolution rate**.
- Cut client onboarding time **from 3 weeks to 6 days** and removed **15+ manual handoff steps** by automating provisioning, account setup, and enablement.
- Deployed **RAG-based internal knowledge systems** (Custom GPTs, Pinecone vector search) that cut product/process answer retrieval for support, CS, and sales **from ~20 minutes to under 2**.

- **Team Leadership & Process Management**

- Managed **5 direct reports** — performance goals, weekly 1:1s, and coaching on enterprise account ownership, technical troubleshooting, and client communication; **all 5 hit quarterly targets and 2 were promoted within a year**.
- Improved team productivity **40%** by standardizing workflows, documenting **25+ repeatable processes**, and building internal enablement tooling for technical account ownership.

PREVIOUS ROLES

Implementation Manager at **Smartkargo.com** (São Paulo, Brazil)

July 2017 – June 2022

- Owned enterprise SaaS implementations for **25+ airline and air-cargo clients across 12 countries** — discovery, configuration, data migration, UAT, training, and go-live — cutting average implementation time **from 16 to 11 weeks** and training **400+ end users**.

Project Manager at **Schlesinger Group** (Los Angeles, USA)

July 2016 – Sep 2017

LANGUAGES

English (Native), Portuguese (Native), Spanish (Business), Hindi (Native), Marathi (Native)

SOFTWARE / TOOLS

CRM, Support & CS: HubSpot, Salesforce, Pipedrive, Gainsight, Totango, ChurnZero, Freshdesk, Zendesk, Intercom

APIs & Data: REST APIs, Webhooks, Postman, SOAP UI, SQL Server, Snowflake, ELK, Power BI, Tableau, VS Code

Automation & AI: n8n, Zapier, Make, Workato, MuleSoft, Airtable, Claude Code, Codex, Cursor, Pinecone / RAG

Cloud, Voice & Collaboration: AWS, Azure, GCP, SIP, PBX, call routing, Slack, Microsoft Teams, Google Workspace, Jira, Confluence, Asana

GLOBAL TEAM COLLABORATION

Led and collaborated with distributed teams across the Americas, Europe, Africa, and Asia, managing cross-functional delivery across time zones through clear communication, goal-setting, and stakeholder alignment.
